About Voles:

Notes

Subnivean Habitat

Certain animals, such as mice, weasels and shrews live under the snowpack. Because the earth gives off heat, it is warmer under the snowpack than to live up on top of the snow.

Research about the other animals and write a few facts under each one. Color the blanket (quilt) or leave it blank. Place it on top and put the other pages under it.

Staple at top. There are two lines placed at top so you know to not staple too far in .
